(1) Phil - Into
===============

(2)   Personalized Music Hub

                    -Font End Devs =
                         Alex Watson
                         Angela Adams
                    -Back End Devs =
                         Anthony Santiago
                         Phil Van Schepen

(3)   Demo
           ----

(4) Alex - overview
===================
                    -Look and Feel
                    -Structure
                    -Usability

(5)   Look and Feel

                    -Color's
                    -How client interacts with site
                    -Bootstrap vs. Foundation

(6)   Structure

                    -Boxes
                    -Navigation
                    -Where to place results

(7)   Usability

                    -Site flow
                    -Load time
                    -Expandability

(8) Angela - overview
=====================

                    -Design evolution
                    -Nice to haves
                    -Front End Summary

(9)   Evolution of our Webpage Design:

                    -Wireframe – originally splash screen
+ results screen
                    -Layout – Bootstrap vs Foundation
                    -Nav Bar – Search Bar + Login to
Spotify Modal

(10)Nice-to-Haves (but we ran out of time):

                    -Tune Stalker Logo

                    -Unified color scheme
                    -Music Recommendations
                    -Trending

(11)Image of UI

                    -Summary

(12)Image of Code

                    -Summary

(13)Anthony - Overview
======================
                    -APIs Used
                    -Nice to Haves

(14)APIs Used

                    -MusixMatch
                    -Spotify

(15)Nice-to-Haves (but we ran out of time):

                    -Youtube (vevo)
                    -Tumblr
                    -Twitter
                    -Reddit

(16)Phil - Back End & Closing
=============================
                    -API Integration
                    -API Compliance
                    -Nice to Haves

(17)API Integration

                    -Query MusixMatch
                    -Display Spotify Player
                    -Additional Variables

(18)API Compliance

                    -MusixMatch Requires a tracking
script and the display of their (grammatically incorrect)
copyright with lyrics.

(19)Nice to Haves

                    -MusixMatch JSON validation
                    -If Vevo/Else Spotify
                    -Extra Varibles
